3ºE2 - Spring 2026

Mercados Financieros

Introduction to the course.
January 13th, 2026

comillas.edu

What we are going to do this first days?

- **Introduction to the course**

- Objectives
- Structure
- Methodology

Market concept

Risk Price and value

+ some notions

Financial Assets Liquidity

Black sawn vs. fractals

Can we predict the future?

BlockChain Fintech

Before proceeding

Let me introduce myself:

Luis Garvía Vega

- Engineer , economist and lawyer.
- 3 hits (E-CUATRO, Pepster and GCyM) and more than 4 failures (Eccen, ANSEFE, Kalimelectric and Gruyere)... ¿Failure?
- Pacífica Capital Gestión partner.
- As freelancer: trustee in bankruptcy, independent valuator and court specialist.
- As teacher: financial markets, project and corporate financing, financial assets valuation and ethics.

Service concept

Course objectives

Course objectives

Structure

Methodology

Principal aim: to know and understand the financial system

What is the financial system?

What is a market?

- is a place,
- where products (or services) are **traded**,
- between buyers and sellers,
- that has **rules**,
- and **agents** that help.

- Agents. Supervisor, brokers...

Aim: Career Planning – Job seeking (for those who want). CNMV, Banco de

España, comercial bank, investment banking, private equity...

- Products are traded at a price.
¿Difference between value and price?

Aim: to embrace this difference.

Aim: to know what is beyond the rule.

- ¿Why we need rules?
*Rules to protect investors, maintain fair, orderly, and efficient markets...
Operating rules (ex: to become a broker or Initial Public Offers IPOs).*

Course objectives

Course objectives

Structure

Methodology

Principal aim: to know and understand the financial system

What about finance?

- Finance has to do with the future.
- What is a **financial asset**?
 - *A financial asset is an intangible asset that derives value because of a contractual claim.*
 - *Return, risk and liquidity.*
 - *¿Examples?*

Can we predict the future?

uncertainty and risk

- Classical models
- Cycles
- Chaos theory
- Behavioral finance
- Black swans

A financial asset is any asset that is:

- Cash and equivalent,
- Equity instruments,
- Contractual right to receive cash or another financial asset from other part.
- A contract that will or may be settled by its owner the entity's own equity instruments and could be non-derivate or a derivate. ([See IAS 32 at Moodle](#))

Aim: to acquire mental tools and a complete framework

Methodology

Principal aim: to know and understand the financial system

Financial assets classification

Governments

Government budget
Incomes - Expenses

Central banks

Cash

Financial entities

Public debt

Loans

Bonds

Stocks

Balance sheet

Assets

Liabilities

Equity

Companies

Derivatives

Basic products

Options

Futures

SWAPs

Structured products

Course objectives

Principal aim: to know and understand the financial system

What to know?

- Spanish financial system with detail
- The system of Central Banks (Basel regulation)
- Money markets and interest rate risk...

...we will see in next slide...

What to understand?

Those who don't know history are doomed to repeat it.

And our world is changing and becoming increasingly complex...

Regarding the past (History)

German hyperinflation, tulip mania (tulip crisis), George Soros and the British Pound, Lehman Brothers, greek government-debt crisis, Bretton Woods...

Regarding the present and the future

	30	31	1	2	3	4	5							
Abril	6	7	8	9	10	11	12	23	24	9	Derivatives			
	13	14	15	16	17	18	19	25	26					
	20	21	22	23	24	25	26	27	28					

Methodology

ASSESSMENT ACTIVITIES	CRITERIA	WEIGHT
Class participation and adequate preparation of classes.	<ul style="list-style-type: none">• Active participation.• Teamwork• Reading before class of the article assessment• Review and assimilation of the classes contents.• Participation at the right time.	20%.
Deliveries, class presentations and partial exercises.	<ul style="list-style-type: none">• Resolution of the request.	30%.
Final exam	<ul style="list-style-type: none">• From 0 to 10.	50%

Some ideas:

Is your class...

Participation

- By groups – Group presentation
- I will ask for voluntaries each week

I hear and I forget. I see and I remember. I do and I understand.

We will deal with so many languages:

- Mathematics
- Accounting
- Excel

Excel is essential.

Internet and the markets
Personal Brand in a Digital World
We will work on it
Be creative

Methodology

The course combines traditional finance with modern analytical tools. These tools will be used throughout the course. They are not mandatory to pass, but they are strongly recommended.

Data & professional tools

- **Excel.** Core analytical tool (not optional in practice)
- **Bloomberg.** Professional market information and reference framework

Artificial Intelligence

- **LLMs (Large Language Models).** *ChatGPT and similar tools* for understanding concepts, synthesizing information, asking better questions
- **Agents.** Automation and assistance in repetitive or structured tasks. Tools support thinking. They do not replace judgment (<https://aistudio.google.com/apps>)
- **Agent orchestration & workflow system.** Antigravity (<https://antigravity.google/>). Coordinating multiple agents for structured analytical workflows.

Knowledge management

- **Obsidian.** Structured thinking, personal knowledge systems (<https://obsidian.md/>)
- **NotebookLM.** Working with documents, context, and connections

Important note. These tools are an opportunity. Using them will significantly improve your understanding of markets. Choosing not to use them is a legitimate choice, but also a limitation.

Methodology

How we will use Artificial Intelligence

Artificial Intelligence will be used as a **support tool** throughout the course. Its purpose is to **improve understanding, structure thinking, and save time**, not to replace learning or judgment.

What AI will be used for

- Clarifying complex concepts and definitions
- Summarizing and structuring information
- Exploring alternative explanations and perspectives
- Generating questions, examples, and counterexamples
- Supporting repetitive or structured analytical tasks

What AI will NOT be used for

- Replacing personal understanding
- Memorizing instead of thinking
- Providing final answers without critical review
- Avoiding effort or engagement with the material
- Delegating responsibility for learning

Key principle

AI can help you think better.
It cannot think for you.

Using AI well requires:

- judgment,
- context,
- and responsibility.

AI is a tool, not a shortcut. How you use it will make a significant difference in what you actually learn from this course.

Rights issue

Over-the-counter

What are we going to do next week?

We will talk about the financial system...

- **The importance of information**

- Efficient markets
- Arbitrage

What is an instant?

- 
- Technical analysis
 - Fundamental analysis
 - Insiders

- **Structure of the financial system**

- General scheme
- Supervisor notion

- **Time and money**

- First steps

Thanks
